

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	05 July 2026
Team ID	Solo Project – Individual Capstone
Project Name	Library Management System (ServiceNow)
Maximum Marks	4 Marks

Our Project — Step 1: Problem Selected

For this individual capstone project, the problem-selection process began with directly observing the manual book-issue system used at the college library. The library's current process depends on paper registers, making it hard to track which books are available or issued at any given moment. Students often wait in queues just to ask whether a book is available, with no way to check status remotely. Librarians spend considerable time cross-verifying paper slips and manually compiling borrowing statistics for reports. These observations were then validated against a structured Requirement Analysis, which confirmed two clear pain points: delays in book access for students and reporting overhead for librarians. Since this is a solo project, the "team gathering" step took the form of stakeholder consultation — informally interviewing students and library staff about their daily frustrations. This grounded the final problem statement in a real, recurring operational gap rather than an assumed one.

Our Project — Step 2: Idea Listing & Grouping

Theme	Ideas Generated
Access & Roles	Separate Student and Librarian roles; role-based ACLs; self-service portal login.
Book Tracking	Central Book table with status field (Available/Issued/Lost); reference qualifier to hide issued books from new requests.
Automation	Flow Designer approval flow; auto-update book status on approval; email notification to the requester.
Usability	UI Policy to lock fields after approval; make Return Date mandatory only when a book is Issued.
Insights	"Most Borrowed Books" report; Active Requests report for librarians.

Our Project — Step 3: Idea Prioritization

Idea	Impact	Effort	Priority
Role-based ACLs (Student/Librarian)	High	Low	Must Have
Book & Borrow Request tables with core fields	High	Low	Must Have
Flow Designer approval → auto issue book	High	Medium	Must Have
Reference qualifier (hide issued books)	Medium	Low	Should Have
UI Policy — mandatory Return Date on Issue	Medium	Low	Should Have
Most Borrowed Books report	Medium	Low	Should Have
Email/SMS overdue reminders	Low	Medium	Could Have (Future)
Integration with external library APIs	Low	High	Could Have (Future)
