Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am	Describe customer with 3-4 key characteristics - who are they?	Describe the customer and their attributes here
I'm trying to	List their outcome or "job" the care about - what are they trying to achieve?	List the thing they are trying to achieve here
but	Describe what problems or barriers stand in the way - what bothers them most?	Describe the problems or barriers that get in the way here
because	Enter the "root cause" of why the problem or barrier exists - what needs to be solved?	Describe the reason the problems or barriers exist
which makes me feel	Describe the emotions from the customer's point of view - how does it impact them emotionally?	Describe the emotions the result from experiencing the problems or barriers

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	a student who wants to borrow a library book	submit a request and track its status online	I have no way to check book availability or my request status	the library still relies on manual registers and counter queues	frustrated and unsure whether I will get the book on time
PS-2	a librarian managing the book catalog	approve/reject requests quickly and see which books are most borrowed	I must manually cross-check paper slips and update stock by hand	there is no centralized, automated system for requests and reporting	overloaded and unable to make fast, data-backed decisions

Problem Statement — Narrative

Library Management System (ServiceNow):

The college library currently issues and tracks books using manual registers and counter-side paperwork. Students cannot see live book availability or the status of their requests, and librarians spend significant time cross-checking stock and compiling usage statistics by hand. This project replaces the manual process with a ServiceNow application that gives students self-service borrow requests and gives librarians automated approvals, role-based access control, and ready-made reports.
