

Ideation Phase

Empathize & Discover

Date	05 July 2026
Team ID	Solo Project – Individual Capstone
Project Name	Smart Library Request Workflow(Service Now)
Maximum Marks	4 Marks

Smart Library Request Work — Empathy Map:

1.Student (Primary User)

The map below captures the behaviours, attitudes, and pain points of the student — the primary user of the Library Management System — based on observation of the current manual book-borrowing process.

Empathy Map - Student User (Library Management System)

PAIN: Manual tracking, delays, no visibility into book availability

GAIN: Self-service requests, instant status updates, fair role-based access

2. Librarian (Secondary User)

Quadrant	Observation
Says & Does	Cross-checks paper registers by hand; manually updates a book's status after every issue or return.
Thinks & Feels	Wants fewer manual errors and a fast way to see which books are in demand.
Sees	Piles of pending request slips; students repeatedly asking for status updates at the counter.
Hears	Requests from faculty for usage reports; complaints about slow turnaround on approvals.
Pain	No single source of truth for book status; compiling reports takes hours of manual counting.
Gain	Automated approvals, accurate real-time book status, and a ready-made "Most Borrowed Books" report.
