

Project Design Phase
Proposed Solution Template

Date	05 July 2026
Team ID	Solo Project – Individual Capstone
Project Name	Library Management System (ServiceNow)
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	The college library relies on manual paper registers to issue and track books. Students cannot check availability or request status remotely, and librarians spend significant time cross-checking stock and compiling usage reports by hand.
2.	Idea / Solution description	A ServiceNow application with distinct Student and Librarian roles, custom Book (u_book) and Borrow Request (u_borrow_request) tables, a Flow Designer flow that routes requests for approval and auto-updates book status, role-based ACLs, UI Policies, and a “Most Borrowed Books” report.
3.	Novelty / Uniqueness	Combines a Reference Qualifier (hides already-issued books at the point of request) with a single approval flow that both issues the book and notifies the student — removing the manual cross-checking step entirely, using only out-of-the-box ServiceNow capabilities.
4.	Social Impact / Customer Satisfaction	Students get instant visibility into book availability and request status, reducing wasted trips to the library. Librarians spend less time on manual bookkeeping and gain instant reporting for better inventory decisions.
5.	Business Model (Revenue Model)	Not a revenue-generating product — currently built and demonstrated on a personal ServiceNow Developer Instance (PDI) as a proof of concept. Institutional rollout would run on a college-provisioned instance; cost savings would come from reduced staff time on manual tracking and reporting.
6.	Scalability of the Solution	The same role/table/ACL/Flow Designer pattern can be extended to other campus services (lab equipment requests, study room booking, digital resource access) without re-architecting the platform.
